

MULTIMEDIA LOGGING SOLUTIONS WITHOUT COMPROMISE

FULL FUNCTION LOCAL AND CLOUD-HOSTED LOGGING SOLUTION WITH BACKUP AND REDUNDANCY

OVERVIEW

Revcord developed its cloud-based recording solutions to meet the needs of today’s call centers. Having the ability to manage and backup your logger to the cloud is the ultimate solution. RevStream provides the flexibility to access your Revcord logger with full functionality in the cloud or locally, and in real-time. This gives you two-way sync and a fail-safe storage option for your logger’s critical data. RevSync is similar to RevStream but offers only a mirrored look with no syncing back to your local logger.

We know how vital it is to have secured data for your logger and offsite storage facilities can be unreliable and expensive. With Revcord’s cloud-hosted recording solutions, you can rest assured your data is safe, redundant, and accessible with HIPAA compliant, 24/7 access to key individuals via secure log-in anywhere and anytime.
